

## GSWW 380 Bolberry Down

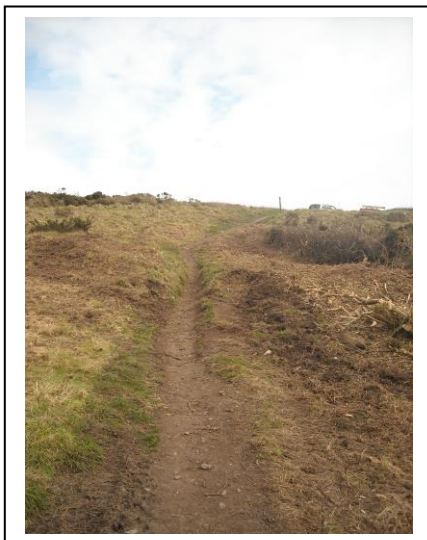

This project upgrades the section of the South West Coast Path between Cathole Cliff and Bolberry Down. This area is renowned for its spectacular views and attracts many visitors for its relatively flat easy access walking. Much of this route however needed surface and drainage improvements as over time, the route had become overgrown, narrow and boggy. The improvements meant that we will be able

to offer a wide easy accessible walking route on a good sustainable surface for the benefit of all walkers of all abilities on this popular section of the SWCP route.

Cathole cliff cut ready for new easier walking route

Bolberry Down prior to work, narrow paths with areas of poor drainage

The project has achieved its aims, improving the width and drainage of the coast path through this area. Much of this route had been affected by the very wet winter, with standing water and poor drainage affecting the surface for walkers.

The new alternative easier walking route that has been created by this project, around Cathole Cliff is being very well used. We have had very positive feedback from walkers about this path.

Throughout the Bolberry Down area the coast path is now up to a very high standard, it has a constant width of around 1.2m and is all fairly level, making it ideal for all ages and abilities to enjoy throughout the year.
